The Product Highlights Sheet is an important document.

Prepared on: 26 November 2019

- It highlights the key terms and risks of the ILP sub-fund and complements the Product Summary.
- It is important to read the Product Summary before deciding whether to purchase the ILP sub-fund. If you do not have a copy, please contact us to ask for one.
- You should not invest in the ILP sub-fund if you do not understand it or are not comfortable with the accompanying risks.

## 

KEY RISKS	
	For further
WHAT ARE THE KEY RISKS OF THIS INVESTMENT? You should consider and satisfy yourself as to the risks of investing in the sub-fund.	For further information, please refer to
An investment in the sub-fund is meant to produce returns over the long-term. You should not expect to obtain short-term gains from such investments.	"Risks" of the Fund Summary for ILP.
The securities and instruments in which the sub-fund may invest are subject to market fluctuations and other risks inherent in such investments and there can be no assurance that any appreciation in value will occur.	ILF.
The risk factors may cause you to lose some or all of your investments. A description of the major risks is provided below.	
Market and Credit Risks	
You are exposed to the following risks:	
Market Risks The value of investments by the sub-fund may go up and down due to changing economic, political or market conditions, or due to an issuer's individual situation.	
Interest Rate Risks The sub-fund's investment in debt securities may be subject to the risk of interest rate fluctuations which may cause the price of debt securities to go up or down. In general, as nominal interest rates rise, the value of fixed income securities is likely to fall.	
<b>Currency Risks</b> Changes in exchange rates between currencies or the conversion from one currency to another may cause the value of a sub-fund's investments to diminish or increase. Currency exchange rates may fluctuate significantly over short periods of time.	
<b>Credit Risks</b> Changes in the financial condition or credit standing of an issuer may negatively affect the sub-fund. An issuer of fixed income securities may suffer adverse changes in its financial condition and unable to pay the principal and/or interest on the instrument.	
Liquidity Risks	
You are exposed to liquidity risks.	
There is no secondary market for the sub-fund. All redemption requests should be made to the Manager.	
Product-Specific Risks	
You are exposed to the following risks:	
<b>Derivatives Risks</b> The sub-fund may invest in derivatives instruments including futures, options, forwards, swaps or credit derivatives for purposes of hedging and/or efficient portfolio management. Derivatives involve risks different from, and, in some cases, greater than, the risks presented by more traditional securities investments. The usage of derivatives may negatively impact the value of the sub-fund. The global exposure of the sub-fund to financial derivatives or embedded financial derivatives will be calculated using the commitment approach and in accordance with provisions of the Code on Collective Investment Schemes. The Manager will ensure that the risk management and compliance procedures are adequate and have been or will be implemented and that it has the necessary expertise to manage the risks relating to the use of financial derivatives.	
High Yield Risks The sub-fund may be subject to greater levels of interest rate, credit and liquidity risks than funds that do not invest in such securities.

APPENDIX: GLOSSARY OF TERMS			
ILP	Investment-Linked Policy		
Average investment grade rating	The sub-fund will have an average credit rating of investment grade (credit rating of 'BBB-' or higher). This is calculated using Standard & Poor's ratings. If there is no Standard & Poor's rating, then the rating to be used is the lowest equivalent rating by Moody's or Fitch, multiplied by the weight of each security.		
Efficient portfolio management	An investment technique that seeks either to reduce the risk or cost or generate additional return consistent with risk profile of the sub-fund.		
Embedded Financial Derivative	Embedded derivative is part of a financial instrument that also includes a non-derivative host contract. The embedded derivative requires that some portion of the contract's cash flows be modified in relation to changes in a variable, such as an interest rate, commodity price, credit rating, or foreign exchange rate.		
Commitment Approach	Commitment approach used in connection with the calculation of global exposure of the sub-fund to derivatives or embedded financial derivative refers to the sum of a) the absolute value of the exposure of each individual financial derivative not involved in netting or hedging arrangements; b) the absolute value of the net exposure of each individual financial derivative after netting or hedging arrangements; and c) the sum of the values of cash collateral received pursuant to: i) the reduction of exposure to counterparties of OTC financial derivatives; and ii) efficient portfolio management techniques relating to securities lending and repurchase transactions, and that are reinvested.		
NAV	Net Asset Value		
Offer/Bid Basis	The offer price is the price that is used to purchase units, the bid price is the price that is used when units are sold. The difference in the bid offer price is known as spread. The spread helps to cover distribution costs, marketing and other general administration expenses.		
Business Day	Any day (other than a Saturday, Sunday or gazetted public holiday) on which commercial banks are open for business in Singapore.
